Figure 1 consists of four panels (a, b, c, d) showing extinction rates of marine invertebrates over time (Ma). The y-axis represents the extinction rate, ranging from 0.0 to 1.0. The x-axis represents time in millions of years (Ma), ranging from 35 to 0.

Panel (a) is a bar chart showing extinction rates for different geological periods. The periods are labeled: Tertiary (Tn), Paleocene (Pc), Eocene (Ec), Oligocene (Olig), Miocene (Mi), Pliocene (Pl), and Pleistocene (Ple). The extinction rates are: Tn (0.0), Pc (0.0), Ec (0.0), Olig (0.0), Mi (0.0), Pl (0.0), and Ple (0.0).

Panel (b) is a line graph showing extinction rates for different geological periods. The periods are labeled: Tn, Pc, Ec, Olig, Mi, Pl, and Ple. The extinction rates are: Tn (0.0), Pc (0.0), Ec (0.0), Olig (0.0), Mi (0.0), Pl (0.0), and Ple (0.0).

Panel (c) is a line graph showing extinction rates for different geological periods. The periods are labeled: Tn, Pc, Ec, Olig, Mi, Pl, and Ple. The extinction rates are: Tn (0.0), Pc (0.0), Ec (0.0), Olig (0.0), Mi (0.0), Pl (0.0), and Ple (0.0).

Panel (d) is a line graph showing extinction rates for different geological periods. The periods are labeled: Tn, Pc, Ec, Olig, Mi, Pl, and Ple. The extinction rates are: Tn (0.0), Pc (0.0), Ec (0.0), Olig (0.0), Mi (0.0), Pl (0.0), and Ple (0.0).
